ELSEVIER

Comput. Methods Appl. Mech. Engrg. 147 (1997) 413–417

Computer methods in applied mechanics and engineering

Subject Index of Volume 147

Boundary element methods

The scaled boundary finite-element method—alias consistent infinitesimal finite-element cell method—for elastodynamics, C. Song and J. Wolf 329–355

Boundary layers

On the fractal fracture in brittle structures Numerical approach, O.K. Panagouli, E.S. Mistakidis and P.D. Panagiotopoulos 1– 15

Control theory

Two-stage strategy for simultaneous slewing and vibration suppression of flexible structures, X. Liu and J. Onoda 357–367

Coupled problems

Finite element modelling of surface tension effects using a Lagrangian–Eulerian kinematic description, S.E. Navti, K. Ravindran, C. Taylor and R.W. Lewis 41– 60

Predictor–corrector finite element approach for electroelastic analysis of hybrid composite plates, K. Xu and A.K. Noor 139–145

The scaled boundary finite-element method—alias consistent infinitesimal finite-element cell method—for elastodynamics, C. Song and J. Wolf 329–355

Automatic remeshing for three-dimensional finite element simulation of welding, L.-E. Lindgren, H.-Å. Häggblad, J.M.J. McDill and A.S. Oddy 401–409

Design of programs

A stabilized finite element method for particulate two-phase flow equations, K. Hiltunen 387–399

Dynamics

Unconditionally stable higher-order Newmark methods by sub-stepping procedure, T.C. Fung 61– 84

Coupled rigid-elastic motion of filament-wound composite robotic arms, S. Oral and S.K. Ider 117–123

Structural damage detection using measured FRF data, Z. Wang, R.M. Lin and M.K. Lim 187–197

Efficient redesign of damped structural systems for target transfer functions, I. Takewaki 275–286

Two-stage strategy for simultaneous slewing and vibration suppression of flexible structures, X. Liu and J. Onoda 357–367

Elasticity

Asymptotic derivation of a general linear model for thin-walled elastic rods, J.M. Rodríguez and J.M. Viaño 287–321

Finite difference methods
A high-order upwind method for the convection–diffusion problem, D. Liang and W. Zhao 105–115

Finite element and matrix methods
Parameter identification for finite deformation elasto-plasticity in principal directions, R. Mahnken and E. Stein 17– 39
Finite element modelling of surface tension effects using a Lagrangian–Eulerian kinematic description, S.E. Navti, K. Ravindran, C. Taylor and R.W. Lewis 41– 60
Unconditionally stable higher-order Newmark methods by sub-stepping procedure, T.C. Fung 61– 84
Finite volume schemes for elliptic and elliptic–hyperbolic problems on triangular meshes, R. Herbin and O. Labergerie 85–103
Coupled rigid-elastic motion of filament-wound composite robotic arms, S. Oral and S.K. Ider 117–123
Predictor–corrector finite element approach for electroelastic analysis of hybrid composite plates, K. Xu and A.K. Noor 139–145
Modelling an undular bore with B-splines, L.R.T. Gardner, G.A. Gardner, F.A. Ayoub and N.K. Amein 147–152
Computational procedure for simulating the contact/impact response in flexible multibody systems, T.M. Wasfy and A.K. Noor 153–166
A finite volume method for analysing the bending deformation of thick and thin plates, M.A. Wheel 199–208
A straightforward structure to construct shape functions for variable *p*-order meshes, M.S. Shephard, S. Dey and J.E. Flaherty 209–233
A simple impedance-infinite element for the finite element solution of the three-dimensional wave equation in unbounded domains, L.F. Kallivokas, J. Bielak and R.C. MacCamy 235–262
Artificial boundary conditions for two-dimensional incompressible viscous flows around an obstacle, W. Bao 263–273
The scaled boundary finite-element method—alias consistent infinitesimal finite-element cell method—for elastodynamics, C. Song and J. Wolf 329–355
Numerical simulation for the problem of infinite elastic foundation, H. Han, W. Bao and T. Wang 369–385
A stabilized finite element method for particulate two-phase flow equations, K. Hiltunen 387–399
Automatic remeshing for three-dimensional finite element simulation of welding, L.-E. Lindgren, H.-Å. Häggblad, J.M.J. McDill and A.S. Oddy 401–409

Fluid mechanics
Finite element modelling of surface tension effects using a Lagrangian–Eulerian kinematic description, S.E. Navti, K. Ravindran, C. Taylor and R.W. Lewis 41– 60
Modelling an undular bore with B-splines, L.R.T. Gardner, G.A. Gardner, F.A. Ayoub and N.K. Amein 147–152
A stabilized finite element method for particulate two-phase flow equations, K. Hiltunen 387–399

Fracture mechanics
On the fractal fracture in brittle structures Numerical approach, O.K. Panagouli, E.S. Mistakidis and P.D. Panagiotopoulos 1– 15

Graphics
Virtual experiment as an educational aid in tribology of cutting, V. Marinov and I. Andonov 323–327

Heat and diffusion
Finite volume schemes for elliptic and elliptic–hyperbolic problems on triangular meshes, R. Herbin and O. Labergerie 85–103
Virtual experiment as an educational aid in tribology of cutting, V. Marinov and I. Andonov 323–327

Incompressible and near incompressible media
Finite element modelling of surface tension effects using a Lagrangian–Eulerian kinematic description, S.E. Navti, K. Ravindran, C. Taylor and R.W. Lewis 41– 60

Kinematics
Finite element modelling of surface tension effects using a Lagrangian–Eulerian kinematic description, S.E. Navti, K. Ravindran, C. Taylor and R.W. Lewis 41– 60
Unconditionally stable higher-order Newmark methods by sub-stepping procedure, T.C. Fung 61– 84

Limit solutions
Asymptotic derivation of a general linear model for thin-walled elastic rods, J.M. Rodríguez and J.M. Viaño 287–321

Material physics
On the fractal fracture in brittle structures Numerical approach, O.K. Panagouli, E.S. Mistakidis and P.D. Panagiotopoulos 1– 15

Matrix calculus
Unconditionally stable higher-order Newmark methods by sub-stepping procedure, T.C. Fung 61– 84

Miscellaneous topics
Virtual experiment as an educational aid in tribology of cutting, V. Marinov and I. Andonov 323–327

Nonlinear dynamics of systems
On the fractal fracture in brittle structures Numerical approach, O.K. Panagouli, E.S. Mistakidis and P.D. Panagiotopoulos 1– 15
Computational procedure for simulating the contact/impact response in flexible multibody systems, T.M. Wasfy and A.K. Noor 153–166

Nonlinear mechanics
On the fractal fracture in brittle structures Numerical approach, O.K. Panagouli, E.S. Mistakidis and P.D. Panagiotopoulos 1– 15
Parameter identification for finite deformation elasto-plasticity in principal directions, R. Mahnken and E. Stein 17– 39
Finite element modelling of surface tension effects using a Lagrangian–Eulerian kinematic description, S.E. Navti, K. Ravindran, C. Taylor and R.W. Lewis 41– 60
Unconditionally stable higher-order Newmark methods by sub-stepping procedure, T.C. Fung 61– 84
The equivalence of stress- and strain-based plasticity theories, P.F. Lu and R. Vaziri 125–138
Computational procedure for simulating the contact/impact response in flexible multibody systems, T.M. Wasfy and A.K. Noor 153–166
Automatic remeshing for three-dimensional finite element simulation of welding, L.-E. Lindgren, H.-Å. Häggblad, J.M.J. McDill and A.S. Oddy 401–409

Numerical solution procedures
On the fractal fracture in brittle structures Numerical approach, O.K. Panagouli, E.S. Mistakidis and P.D. Panagiotopoulos 1– 15
Parameter identification for finite deformation elasto-plasticity in principal directions, R. Mahnken and E. Stein 17– 39
Unconditionally stable higher-order Newmark methods by sub-stepping procedure, T.C. Fung 61– 84
Finite volume schemes for elliptic and elliptic–hyperbolic problems on triangular meshes, R. Herbin and O. Labergerie 85–103
Convergence of Newton-type methods in incremental return mapping analysis of elasto-plastic problems, R. Blaheta 167–185
A straightforward structure to construct shape functions for variable *p*-order meshes, M.S. Shephard, S. Dey and J.E. Flaherty 209–233
Efficient redesign of damped structural systems for target transfer functions, I. Takewaki 275–286
Asymptotic derivation of a general linear model for thin-walled elastic rods, J.M. Rodríguez and J.M. Viaño 287–321
The scaled boundary finite-element method—alias consistent infinitesimal finite-element cell method—for elastodynamics, C. Song and J. Wolf 329–355

Optimization
Two-stage strategy for simultaneous slewing and vibration suppression of flexible structures, X. Liu and J. Onoda 357–367

Optimization and design of structures
Efficient redesign of damped structural systems for target transfer functions, I. Takewaki 275–286
Two-stage strategy for simultaneous slewing and vibration suppression of flexible structures, X. Liu and J. Onoda 357–367

Plasticity
Parameter identification for finite deformation elasto-plasticity in principal directions, R. Mahnken and E. Stein 17– 39
The equivalence of stress- and strain-based plasticity theories, P.F. Lu and R. Vaziri 125–138
Convergence of Newton-type methods in incremental return mapping analysis of elasto-plastic problems, R. Blaheta 167–185
Automatic remeshing for three-dimensional finite element simulation of welding, L.-E. Lindgren, H.-Å. Häggblad, J.M.J. McDill and A.S. Oddy 401–409

Shells and plates
Predictor–corrector finite element approach for electroelastic analysis of hybrid composite plates, K. Xu and A.K. Noor 139–145
A finite volume method for analysing the bending deformation of thick and thin plates, M.A. Wheel 199–208

Solutions of ordinary and partial differential equations
A high-order upwind method for the convection–diffusion problem, D. Liang and W. Zhao 105–115,
A straightforward structure to construct shape functions for variable *p*-order meshes, M.S. Shephard, S. Dey and J.E. Flaherty 209–233

Spline approximation
Modelling an undular bore with B-splines, L.R.T. Gardner, G.A. Gardner, F.A. Ayoub and N.K. Amein 147–152

Structural mechanics
On the fractal fracture in brittle structures Numerical approach, O.K. Panagouli, E.S. Mistakidis and P.D. Panagiotopoulos 1– 15
Unconditionally stable higher-order Newmark methods by sub-stepping procedure, T.C. Fung 61– 84
Predictor–corrector finite element approach for electroelastic analysis of hybrid composite plates, K. Xu and A.K. Noor 139–145
Computational procedure for simulating the contact/impact response in flexible multibody systems, T.M. Wasfy and A.K. Noor 153–166
Efficient redesign of damped structural systems for target transfer functions, I. Takewaki 275–286
The scaled boundary finite-element method—alias consistent infinitesimal finite-element cell method—for elastodynamics, C. Song and J. Wolf 329–355

Systems of linear and nonlinear simultaneous equations
Convergence of Newton-type methods in incremental return mapping analysis of elasto-plastic problems, R. Blaheta 167–185
A stabilized finite element method for particulate two-phase flow equations, K. Hiltunen 387–399

Thermal effects and thermodynamics
Automatic remeshing for three-dimensional finite element simulation of welding, L.-E. Lindgren, H.-Å. Häggblad, J.M.J. McDill and A.S. Oddy 401–409

Transport phenomena
Finite volume schemes for elliptic and elliptic–hyperbolic problems on triangular meshes, R. Herbin and O. Labergerie 85–103

Viscoelastic and viscoplastic media
Efficient redesign of damped structural systems for target transfer functions, I. Takewaki 275–286

Viscous flow
Finite element modelling of surface tension effects using a Lagrangian–Eulerian kinematic description, S.E. Navti, K. Ravindran, C. Taylor and R.W. Lewis 41– 60
Artificial boundary conditions for two-dimensional incompressible viscous flows around an obstacle, W. Bao 263–273

Wave motion
A simple impedance-infinite element for the finite element solution of the three-dimensional wave equation in unbounded domains, L.F. Kallivokas, J. Bielak and R.C. MacCamy 235–262
The scaled boundary finite-element method—alias consistent infinitesimal finite-element cell method—for elastodynamics, C. Song and J. Wolf 329–355
